	Title
1	Method of treating a patient's teeth using fluoride releasing glass composition
2	Saliva cured one component dental formulations
3	Bioactive glass compositions and methods of treatment using bioactive glass
4	Methods of treatment using bioactive glass
5	THERAPEUTIC AGENT FOR DENTAL HYPERSENSITIVITY
6	METHOD OF TREATING A PATIENT'S TEETH USING FLUORIDE RELEASING GLASS COMPOSITION
7	Treating sensitive teeth comprises attaching fluoride releasing glass composition to a person's tooth, and allowing fluoride to be slowly released over time to reduce chronic and/or acute tooth sensitivity
8	Cationically polymerizable composite coating composition for pattern formation, comprise condensation product of hydrolysable silane(s) having fluorine-containing group, cationically polymerizable organic resin(s), and cationic initiator

	Title
9	Coating composition for liquid repellent layer, contains condensation product of hydrolysable silane(s) having fluorine-containing group and hydrolysable silane(s) having cationically polymerizable group, and cationic initiator
10	Self hardening glass carbomer composition useful for e.g. dental filling is obtained by treating fluorosilicate glass powder with aqueous acid and poly(dialkylsiloxane) having terminal hydroxyl groups; and separating treated powder
11	Bioactive glass composition containing e.g. silica, calcium oxide, sodium oxide and calcium fluoride - used for e.g. preventing tooth decay or sealing pits or fissures
12	Fluoro-alumino-silicate glass powders - free of alkali and alkaline earth ions, for dental glass ionomer cements
